

Arkansas Law now requires that all new publicly funded outdoor lighting must be shielded. Shielding directs more light down on the ground where it's needed, often allowing lower wattage fixtures to be used. Shielded fixtures are not expensive.

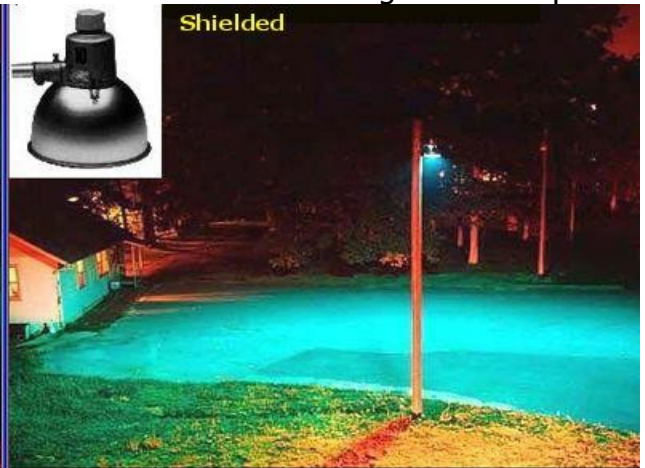

The proposed lighting ordinance for Eureka Springs would only require that new privately installed outdoor lighting in Eureka Springs meet glare and energy standards similar to those the City already follows for its municipal outdoor lighting.

Fixtures on the left would be prohibited.

Unshielded

Fixtures on the right are acceptable.

Shielded
